## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-4 and 7-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Sowinski (US 6,135,805).

Regarding claims 1-2 and 5, Sowinski discloses a wire connector (10) comprising:

a housing (15) define cavity (70) therein with openings (78);

an electrically conductive clip (red portion, see Examiner's attachment) having at least first and second retaining finger (14, 14) forming an insulation displacement type contact, each of which engages an individual conductor (80); and

a blade-type electrically conductive extension (blue portion, see Examiner's attachment) in shorting electrical engagement with the clip and extending through a

housing wall to an exterior of the housing, at least a portion of the extension on the exterior of the housing being electrically conductive.

Regarding claim 3, Sowinski discloses the housing includes two parts the base (72) and the cap (un-numbered, top surface of the housing 15).

Regarding claim 4, Sowinski discloses the conductive clip has a plurality of fingers (24) forming a push-in type connector.

Regarding claims 7 and 8, the method claims are deemed inherent.

Sowinski discloses a method of electrically connecting two or more wire (80) to a common terminus (not shown, a terminal that engages to conductive extension 18), comprising the step of providing a push-in wire connector (10) having a conductive clip (12), providing a electrical connecting extension (18) electrically shorted to the clip and extending to the exterior of the housing, pushing the stripped end into the housing and into engagement with the clip, and attaching the extension to said terminus.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sowinski (US 6,135,805).

Art Unit: 2833

Sowinski substantially disclose the claimed invention except that the conductive extension is a pig-tail.

It would have been obvious matter of design choice to change the Sowinski's conductive extension to pig-tail shaped, since such a modification would have involved a mere change in the shape of a component. A change in shape is generally recognized as being within the level of ordinary skill in the art.

### *Response to Arguments*

5. Applicant's arguments with respect to claims 1-8 have been considered but are moot in view of the new ground(s) of rejection.
